SERVING INDUSTRY SINCE 1947

## PRECISION MECHANICAL PROCESSING

Highly technical  
components production  
with Hi-Tech plastic  
materials

**ATAG** has been serving industry since **1947**.

Established on solid foundations, we have been able to constantly update till become an important supplier in the national market of technical articles. Our presence is constantly growing and is widespread on the territory, with over 10,000 square meters of warehouse.

In recent years we have associated our experiences and professional competence with those of complementary companies, absorbing and integrating them into our group, so to improve our skills inspired by the strengths of each one.

This catalogue offers an overview of our **precision mechanical machining**: we produce highly technical parts using **high-level plastics** (such as PTFE, PEEK, HDPE, POM, PSU, PI, etc.) materials.

Our range of products includes semi-finished plastic products that have always been present in the ATAG stock of articles.

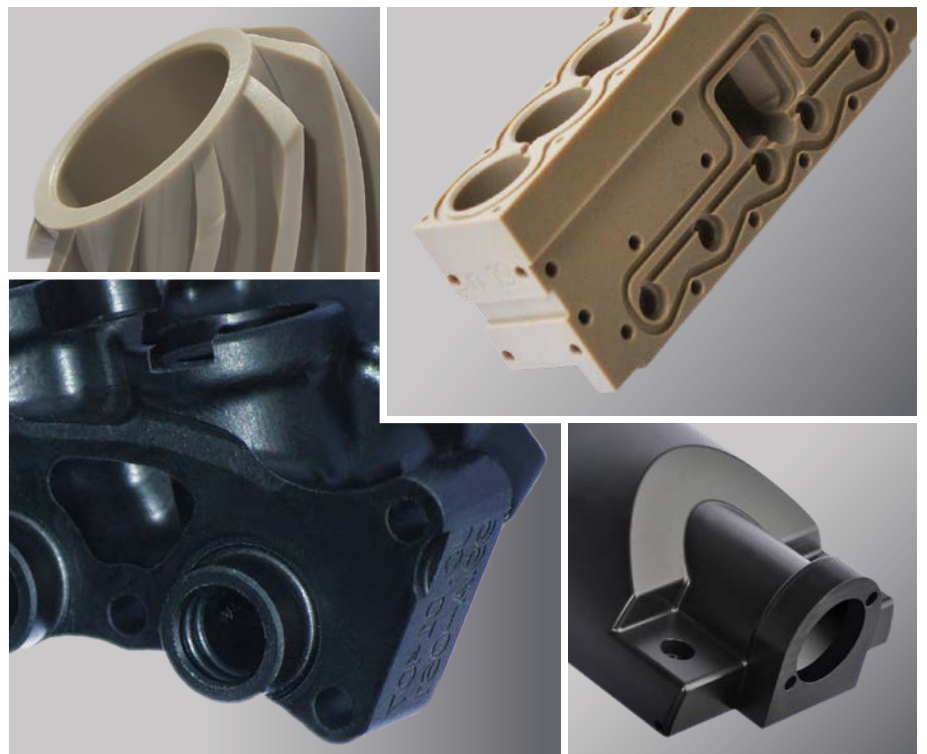

**Our excellent equipment**, together with a perfect technical preparation of the staff and a constant updating, allow us to develop complex and delicate processes in sensitive sectors, such as:

- Aerospace
- Racing Auto & Motorcycle
- Packaging
- Chemistry/  
Pharmaceuticals
- Bottling
- Medicine
- Surgery
- Microelectronics
- Vending
- Food Industry
- Pneumatic Industry
- Glass Industry

Employing specific technologies, together with the high **operational and organizational capacity** of our Staff, allow us to compete at the highest levels in the mechanical processing of high-end plastic products sector, satisfying any requests, even for **small batches**.

Using **first-rate quality machines**, we can satisfy any requests about plastic materials, including those involving centesimal tolerances. An **efficient control and design center** allows us to provide our customers with the **best solutions** to their requests in a short time.

The combination of know-how, structural integrity and reliability makes **ATAG** a **strategic partner** in the development of new products.
