TECHNOLOGY

PAST, PRESENT, FUTURE

ATAG is serving industry since **1947** and is constantly growing.

The wide range of products, the three domestic locations plus one in Switzerland, the large warehouses, the extensive sales network, the increasingly stringent internal workings, the website in constant evolution and a service based on the qualified technical expertise offered by our sales department, are the reasons why our customers rely constantly on ATAG.

In recent years we have incorporated complementary companies, using their great competencies to improve our own skills. An efficient export department, our European resellers and long-standing customers, allow us to have a better knowledge of foreign markets and strengthen our presence beyond the Italian borders.

Collaborations and agreements with international prestige partners enable us to offer our country products and solutions that are already appreciated and well established in Europe, and to stimulate our research into improved solutions for the Italian industry.

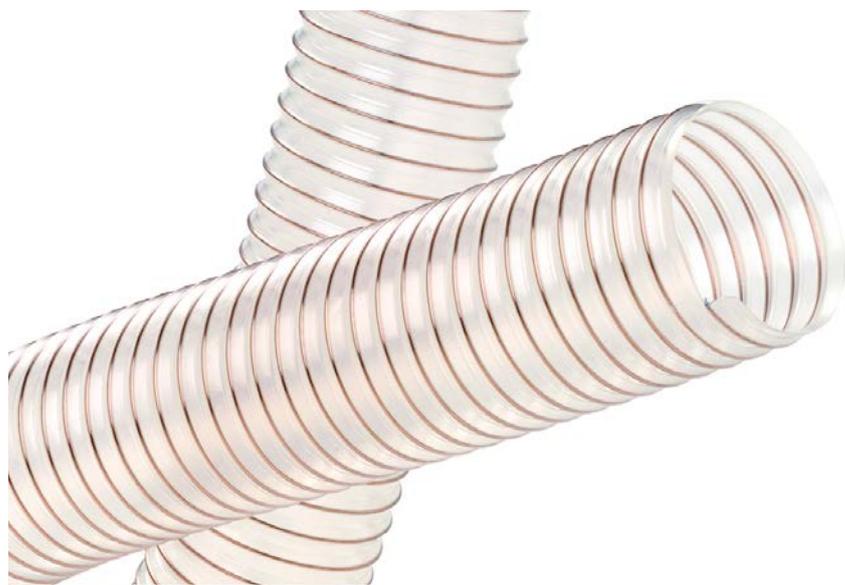

ATAG PRODUCT OVERVIEW

PU TUBES		4
PVC-PU HOSES		4
RUBBER HOSES		5
CONNECTED RUBBER HOSES		5
SILICONE TUBES AND GASKETS		6
PTFE TUBES AND GASKETS		6
ELECTROHEATED HOSES		7
FITTINGS		7
SPECIAL FLEXIBLE CONNECTORS		8
RUBBER EXPANSION JOINTS		8
COMPACT SILICONE SHEETS		9
FOAM SILICONE SHEETS		9
PIERCAN SPECIAL GLOVES		10
METAL-DETECTABLE MATERIAL PRODUCTS		10
PRECISION MACHINING		11
EXTRUDED RUBBER PRODUCTS		11

PU Tubes/Hoses

Suitable for transport of grains, flours, abrasive powders, sugars. With **food products certifications** and permanent **antistatic** treatments, both for the same article. Our hoses are made in ether or ester based polyurethane.

Available in a variety of thickness and weight, flexibility, performance and durability.

PVC-PU hoses

Hoses characterized by a double structure and heavier than the previous ones, they withstand major loads.

Thanks to better performances in **pression** and **suction**, they are widely used in the transport of fluids, beverages (also with concentrations of alcohol), dairy products, marce, feed, etc.

Rubber Hoses

Rubber pipes with substrates of various types for every kind of production.

Supplied also with rubbers and compounds **complying with the most restrictive food industry rules.**

Suitable for pression and suction.

Rubber Hoses with Fittings

Fitting assembly on hoses plays a crucial role in the food sector.

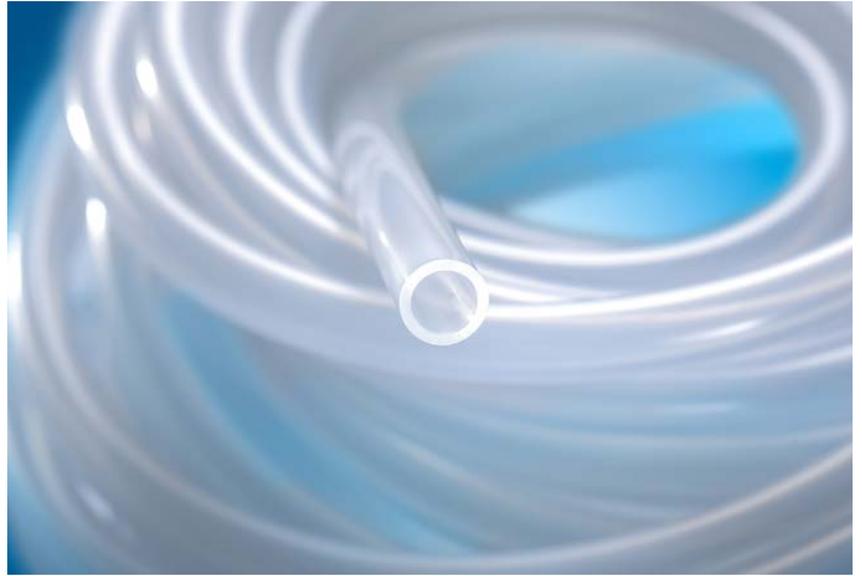

ATAG uses the best materials. Our fittings are designed in order to be easy to clean and handle and we guarantee a perfect professional assembly on the more suitable hose.

SILICONE Tubes and Gaskets

Food grade platinum silicone tubes made in rubber only or braided, with or without colored stripes for a more rational use and recognition in plants.

Gaskets manufactured with customized silicone formulations, purity of compounds, polished and tested molds, manufactured in a clean room.

PTFE Tubes and Gaskets

Thin-walled tubes made of PTFE, a stable and chemically inert material suitable for food applications, also at high temperature.

Unlike the rubber hose, PTFE tube offers a rigidity often necessary and appreciated.

Electrically Heated Hoses

Used in transportation of adhesives, pastes, liquids, gases and food's gels, when fluids properties must be preserved and **temperature kept constant**.

Composed of an inner tube in **PTFE** that guarantees maximum non-stick and minimal friction.

Fittings

Fittings according to Cuna, DIN11851, CAMLOCK, GUILLEMIN-AFNOR, STORZ, SMS, CLAMP, besides fittings Garolla for the wine sector, screw BSP couplings, NPT and Cassoni pitch, anti-extract fittings for steam applications, MANN TEK anti-drip for hazardous substances discharge.

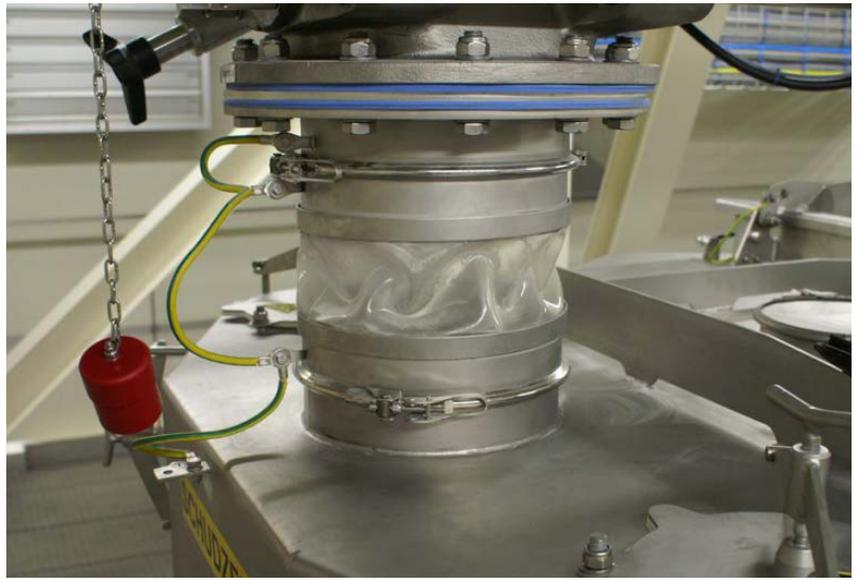

Flanges made in stainless steel or other materials.

Special Flexible Connectors

Professional solutions for flexible connections with elements suitable for weighing instruments or disconnecting plant sections. Our flexible connectors are proposed with Tri-Clamp or Jacob rapids connections, also fitting for use in ATEX zones at low explosive hazard.

Inflatable elements for filling bags.

Rubber Expansion Joints

Expansion joints and anti-vibration rubber elements, perfect to absorb the plants vibrations and manage misalignments.

Compounds designed to meet any need, also available with additional internal accessories in compliance with the sector standard requirements.

INTERNAL COATING IN **PTFE**
FDA COMPLIANT

INTERNAL COATING IN **PTFE**
WITH **SUPPORT RING** FOR VACUUM
FDA COMPLIANT

Compact Silicone Sheets

177 2600 FDA 21 CFR, BFR XV and EC 1935/2004 certified food grade silicone sheets. Available in a wide variety of hardnesses and colors, also in metal detectable blue.

FDA for temperatures up to 300°C for intermittent periods also available.

Custom die-cutting on request.

Foam Silicone Sheets

Closed-cell silicone foam sheets in various densities, thermally stable over a wide range of temperatures (-60 ° C to 230 ° C), available in UL94V0 and EN 45545-2 degrees.

Custom die-cutting on request.

Piercan Special Gloves

ATAG is the only authorized supplier in Italy for the Piercan special gloves. They are essential in a safe handling of products when there is risk of contamination and/or contagion.

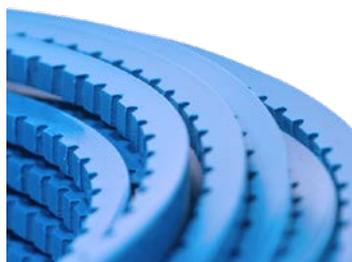

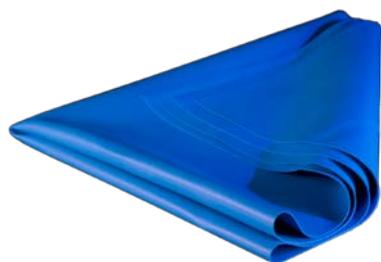

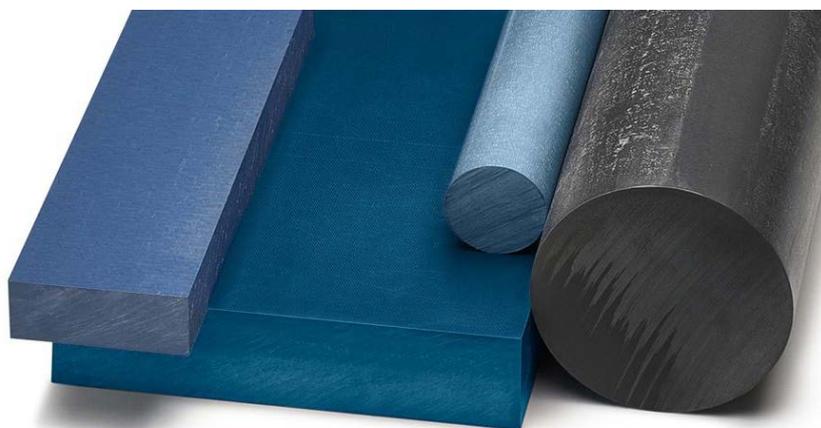

Products in constant evolution and conform to the increasingly restrictive sector regulations.

Metaldetectable products

Preventing contamination by foreign bodies means ensuring the safety of a production.

ATAG supplies technical products made with metaldetectable materials from both the world of plastic and rubber, or with special fabrics.

Mechanical Machining

ATAG manufactures custom parts with high-end and certified plastic materials, through precision machining and injection molded parts.

ATAG also makes pre-mounted assemblies.

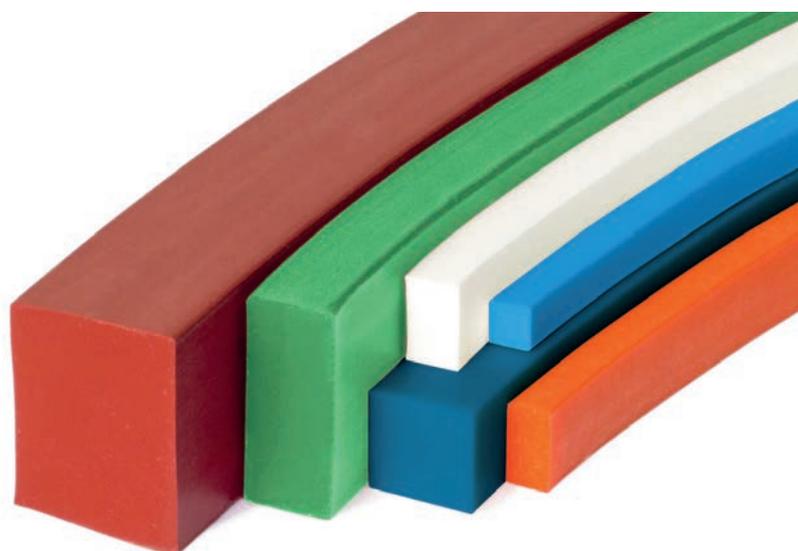

Extruded rubber profiles

ATAG extrudes shaped profiles in rubber, on customer's drawing. The used compounds are of various types, colors and hardness.

FDA and 1935/2004 certified. Metal detectable also available.

We also manufacture O-ring and inflatable gaskets.
